PENTESEC SERVICES
DIGITAL RISK AND ACCESS MANAGEMENT

PENTESEC
CYBER SECURITY

> **Technology First means we only offer services we believe in and have mastered.** We embed these services into our infrastructure, so our engineers have authentic experience using the solutions that we provide to you.

Identity and Access Management

okta

Okta connects any person with any application on any device. They provide an enterprise-grade identity management service, built for the cloud, but compatible with many on-premises applications. With Okta, IT can manage any employee's access to any application or device. You can also manage customer identity initiatives, enhance customer engagement and create a digital platform your customers can trust and believe in.

Okta is the leading independent provider of identity for the enterprise. The Okta Identity Cloud enables organisations to securely connect the right people to the right technologies at the right time. With over 6,500 pre-built integrations to applications and infrastructure providers, Okta customers can easily and securely use the best technologies for their business.

Over 8,000 organisations, including 20th Century Fox, Engie, Slack, Gatwick Airport and Oxfam, trust Okta to help protect the identities of their workforces and customers.

Digital Risk Management

proofpoint.

Proofpoint Digital Risk Protection secures your brand and customers against digital security risks across web domains, social media, and the deep and dark web. It is the only solution that gives you a holistic defence for all your digital engagement channels.

Digital Risk Protection helps you gain situational awareness of potential social media threats against your key executives and locations. Our solution crawls the far reaches of the digital world, spanning millions of web pages and social sites daily. This helps you get in front of threats, whether they are planned, imminent or occurring in real-time.

Engaging on digital channels while ensuring compliance does not have to be a headache. Our digital protection solution helps you rein in account social media sprawl and supervise all your content to ensure it complies with public communications and retention rules from FINRA, SEC, FCA, IIROC and others.

PENTESEC SERVICES DIGITAL RISK AND ACCESS MANAGEMENT

Identity and Access Management

Swivel Secure is an industry leading authentication solution. Founded in 2001, Swivel Secure protects thousands of organisations in over 52 countries. The award winning AuthControl Sentry® delivers multi-factor authentication, combined with risk-based authentication and single sign-on for securely authenticating all applications, both cloud and on-premise.

Two-Factor Authentication provides peace of mind when protecting user access to corporate assets. Its purpose is to make attacker's lives harder and reduce the risk of fraud and theft, and it is a hugely effective yet simple Threat Prevention tool.

Designed for flexibility, AuthControl Sentry works with a diverse range of authentication factors for optimum deployment, including Image, Mobile, Biometrics, Hardware Tokens and Voice control, allowing you to adapt the solution to your risk needs.

Personal Data Discovery

You don't know what you don't know. Rogue data within an organisation exposes you to risks of fines and damage to your reputation. It is also unnecessary to hoard personal data that you do not need, too much information becomes a security risk.

1Touch.io analyses traffic on a continuous basis, covering all elements of your network in real time, to detect any storage, processing or sharing of personal data both inside and outside of your network.

1Touch crawls through every repository or database available to uncover forgotten data and once it knows where your skeletons lie, it creates a holistic view of where and how the data is being used, whether it is in motion or in rest, structure or unstructured and whether it is of known or unknown origin.

Digital Risk Management

RiskIQ provides comprehensive discovery, intelligence, and the mitigation of threats associated with an organisation's digital presence. They use a proprietary intelligence collection network which is constantly monitoring digital channels across the open, deep and dark web to illuminate and eliminate risk in the wild before it impacts your business.

Using the Illuminate platform, users can map and monitor their internet-exposed digital attack surface, understand and mitigate exposures and expedite external threat investigation. As companies grow, they not only become bigger targets for attack, they also begin to lose track of digital assets, online profiles and brand usage across the internet.

Attackers search for unknown, unprotected and unmonitored digital assets which span from your internal network across the full breadth of the internet and use them to leverage attacks against your business and its customers.
