

DEFINE. DESIGN. DELIVER.

# PENTESEC SERVICES SECURE THE CLOUD

**Technology First** means we only offer services we believe in and have mastered. We embed these services into our infrastructure, so our engineers have authentic experience using the solutions that we provide to you.

## Cloud Access Security Broker

Proofpoint's Cloud Access Security Broker (PCASB) protects people and data from advanced threats, accidental sharing and compliance risks in the cloud.

With PCASB, you can deploy cloud apps and services with confidence and secure applications like O365, Google G Suite, Box and more.

Powerful analytics help you grant the right levels of access to users and third-party apps based on the risk factors that matter to you.

Proofpoint's solution gives you people-centric visibility and control over your cloud apps, so you can deploy cloud services with confidence and protect your people, your data and your business.

## Cloud Security Orchestration and Compliance

Check Point's CloudGuard Dome9 is a comprehensive software platform for public cloud security and compliance orchestration.

Dome9 lets organisations visualise and assess their security posture, detect misconfigurations, model and enforce security best practices and protect against identity theft and data loss in the cloud.

Dome9 delivers security capabilities across Amazon Web Services, Microsoft Azure, and Google Cloud Platform (GCP).

Enforce gold standard policies across accounts, projects, regions and virtual networks to enhance your protection and secure your environment.

## Web Application Security and Firewall

Browsers are often the weakest link in application security.

F5's Advanced Web Application Firewall (WAF) protects your apps with behavioural analytics, proactive bot defence and application-layer encryption of sensitive data.

Attackers try to compromise the user via common phishing attacks embedded in email messages or social media posts.

Malicious links enable attackers to embed malware on the target machine.

With F5 you can detect and mitigate attacks with the highest level of accuracy, before they cause damage.
